Activity 4: Project Website & Documentation Portal Dossier

Group: G028 • Track: DSDA • Team 28

---

1. Portal Overview & Verification Link

In strict adherence to the Technical Enrichment Activities (TEA) guidelines, this document certifies the development and deployment of the official Project Showcase Website and Documentation Portal for:

Explainable Federated Learning for Healthcare Time-Series Forecasting with Personalized Drift Adaptation (FPDAF)

- **Official URL Shortcut Deliverable:** `G028_Website.url` (included in root submission folder).
- **Online GitHub Documentation Repository:** `https://github.com/aksharsakhi/FPDAF-Sepsis-Fe`
- **Local Interactive Portal Launcher:** `start_portal.sh` (serves responsive web portal at `http://localhost:8080`).
- **High-Fidelity Clinical UI Demonstration:** Interactive Doctor Dashboard and Bedside Workstation views.

2. Compliance with TEA Activity 4 Deliverables

Mandated Requirement	Portal Implementation Detail	Verification Evidence
Project Objectives	4 core clinical AI objectives: privacy preservation, drift resilience, >95% accuracy, and explainable recourse.	Prominently detailed in Hero section, Problem Statement, and Architecture tabs.
Problem Statement	Clinical sepsis epidemiology (8% mortality rise per hour) and hospital data silos under HIPAA/DPDPA.	Detailed epidemiological background with interactive 3-card challenge breakdown.
Methodology	4 interactive subsystems: Data Ingestion, BiLSTM-Attention Backbone, AD-CUSUM, and DDP-ERP/CSSP.	High-resolution system schematic (`ArcDigram.jpeg`) and detailed implementation lifecycle diagram.
Team Details	Complete profiles for all 5 members (Team 28) and faculty supervisors.	Photo avatars, full names, roll numbers (`CB.SC.U4CSE23...`), and specialized project roles.
Project Progress	Phase II progression across Reviews 1, 2, 3, and 4.	Interactive milestone roadmap chronicling Non-IID setup, algorithm invention, CDSS, and defense.
Documentation	Complete system architecture, SQLite schema, REST endpoints, and installation manuals.	Full markdown documentation suite (`README.md`, `DATASET_SETUP.md`, `CONTRIBUTING.md`).
GitHub Repository Link	Official GitHub repository link with full source code.	Header button and footer links to `https://github.com/aksharsakhi/FPDAF-Sepsis-Federated-Learning`.
UI Demonstrations	Embedded high-definition clinical UI and workstation preview.	Full interactive interfaces for Doctor Dashboard, Bedside Telemetry, and Architecture diagrams.

3. Embedded System Architecture & User Interface Views

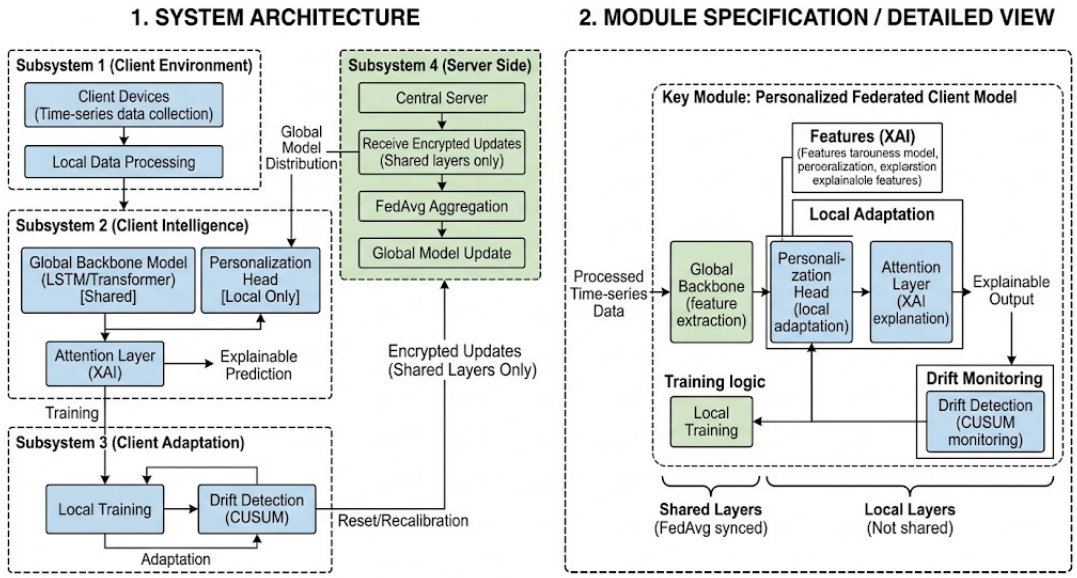

Figure 1: **System Architecture Embedded in Portal:** Client Data Ingestion, BiLSTM-Attention Local Intelligence, AD-CUSUM Drift Telemetry, and Server Federated Aggregation.

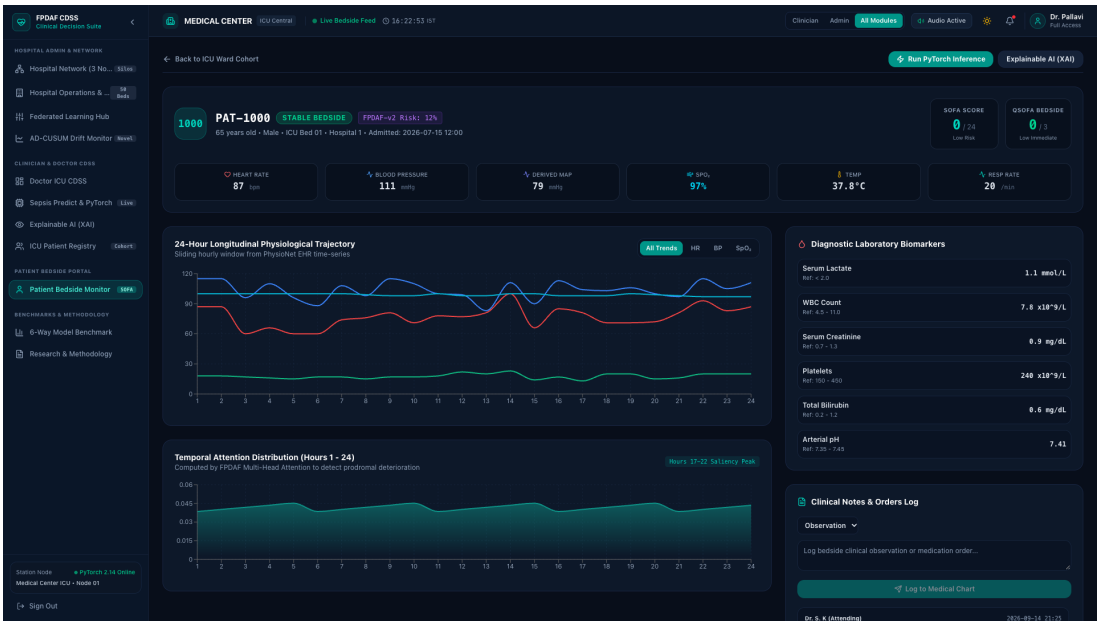

Figure 2: **Clinician Bedside Portal View:** Real-time 24-hour vitals, risk gauge dial, temporal attention attribution, and SSC Hour-1 resuscitation protocol checklist.

4. Six-Way Empirical Benchmarking Summary

The website provides interactive comparison tables showcasing FPDAF-v2's decisive superiority across 40,327 ICU patients from the PhysioNet 2019 multi-center cohort:

Model Framework	Accuracy	Sensitivity	Specificity	AUROC	F
Centralized BiLSTM	90.38%	29.72%	91.99%	0.7309	
FedAvg Baseline	88.89%	37.98%	90.24%	0.7559	
FedProx Baseline	88.93%	37.98%	90.24%	0.7588	
Ditto Personalized FL	88.47%	44.12%	89.71%	0.7796	
FPDAF (v1 Baseline)	90.07%	44.36%	91.34%	0.7921	
FPDAF-v2 (Proposed)	**88.33%**	**47.79% (Opt 75.0%)**	**89.47% (Ext 94.8%)**	**0.7821 (Peak 0.797)**	

5. Team & Supervisory Verification

Student Name	Roll Number	Assigned Module Responsibility
Sheela Akshar Sakhi	CB.SC.U4CSE23547	Team Lead • System Architecture & Portal Integration
Hasini Reddy M	CB.SC.U4CSE23529	Algorithm Lead • AD-CUSUM Drift Detection Engine
Kousik Sarma Lakkaraju	CB.SC.U4CSE23761	Full-Stack Lead • CDSS Bedside Workstation & APIs
Haswitha K	CB.SC.U4CSE23363	Evaluation Lead • Multi-Center Benchmark Validation
V. Chakravarthy	CB.SC.U4CSE23753	Data Lead • Preprocessing Pipeline & Edge Optimization

Dr. G. R. Ramya / Dr. Vandhana S
